

Pruning

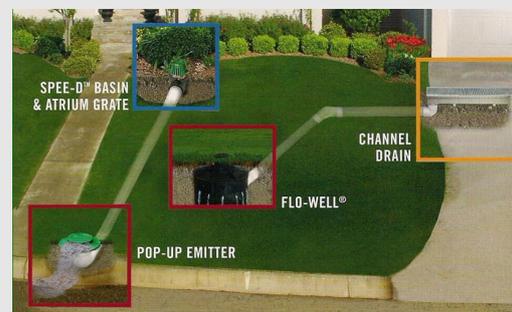

Winter pruning is an important part of caring and ensuring a healthy landscape. It's the best time to prune many evergreen trees/shrubs and trees/shrubs that bloom in late summer. Late winter is also a good time to do heavier renovation pruning on overgrown shrubs that can tolerate it; they will have the entire spring and summer growing season to rejuvenate. Aspen Creek can do all the work for you. Call us today for a consultation on winter pruning.

Drainage Solutions

Standing water in your landscape can lead to damaged foundations, unhealthy plants and a muddy, unusable lawn. For this reason we make drainage a priority in our design plan. We have experience installing all types of drainage systems including French drains, rain gardens and dry wells. We determine which option is best by locating where your drainage problems are, determining the root cause and installing the solution that best suits your needs.

** Holiday Hours **

Our office will be closed December 21st-January 3rd, but will return landscape emergency phone calls as soon as we can.
